

**FIBIGIA THESIGERI (CRUCIFERAE), A NEW RECORD FROM  
IRAN**

**M. Moussavi**

Moussavi, M. 1985 12 31 *Fibigia thesigeri* (Cruciferae), a new record from Iran. — *Iran. Journ. Bot.* 3(1): 63—64. Tehran.

*Fibigia thesigeri*, collected in the expedition to the Zanjan province, is reported as a new record from Iran.

Mahmoud Moussavi, Department of Botany, Plant Pests and Diseases Research Institute, P. O. Box 11365, Tehran, Iran.

گزارش *Fibigia thesigeri* بعنوان گونه جدید برای ایران

از: محمود موسوی

در مسافرت علمی جمع‌آوری و بررسی گیاهان که به منطقه علم‌کندی زنجان انجام گرفت در میان گیاهان خانواده Cruciferae گونه *Fibigia thesigeri* جمع‌آوری گردید که برای نخستین بار از ایران گزارش میگردد.

Fig.1. *Fibigia thesigeri*. — A. Habit (x 0.5). — B. Leaf (nat. size). — C. Flower (x 0.5). — D. Fruit (x 0.5).

***Fibigia thesigeri* Rech. f.**

Zanjan: Mahnesan, Alam-Kandy, Ghar-Ghalan, 2500–2800 m, 27 June 1983, Moussavi, Habibi & Tehrani 40494 — E.

This species is reported as a new record to the flora of Iran. It was recorded in Flora Iranica (cf. Rechinger 1968 p. 143) from a single and in fact type locality in Iraqi Kordestan. The new gathering is second collection of the species and it is at a distance of about

400 km to the east of first collection.

*Fibigia thesigeri* is a low turfy somewhat woody plant with covering of the greyish appressed stellate hairs. Flowering branches 5–9 cm high, bearing yellow flowers. Silicule suborbicular.
